Ice Drip Coffee is a method of slowly brewing coffee at low temperatures by using ice water. The iced coffee extracted in this way has less bitterness and sourness, and can taste more layers of bright aroma.

In the case of exactly the same coffee powder conditions. There are several factors that affect the flavor, such as water temperature, flow rate, time and TDS (Total Dissolved Solid) water quality.

We added the TDS detector to the machine, so that you can clearly know the mineral content in the water, and with the adjustable temperature, flow rate and time, you can adjust the most suitable parameters according to the tone of different beans to brew a perfect cup of iced coffee.

Features

- Temperature adjustable (Room temperature ~ 4°C)
- Flow Rate adjustable (Lowest 0.5ml/s)
- Extract Time settable
- TDS (Total Dissolved Solid) water quality detector
- Glass (Inside) and Tritan (Outside) Brewer
- Stainless Portafilter

Specification

- AC Power 100~120V or 220~240V
- Maximum Powder Fill 120 g
- Capacity of Refrigeration Pot 180 ml
- Capacity of Tank 1.5 Liters
